EPPUR SI MUOVE: AXIOMATICS, FUNDAMENTALS AND EXPERIMENTAL VERIFICATION OF THE ABSOLUTE SPACE-TIME THEORY (CLASSIC REPRINT)

Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Eppur Si Muove: Axiomatics, Fundamentals and Experimental Verification of the Absolute Space-Time Theory So many articles and so many experimental efforts in the last 100 years have been dedicated to the problem of determining absolute space that it seems almost senseless to continue spending time and money searching for a possible refutation of the principle of relativity. This principle, first formulated by Galilei, has obtained such a firm experimental confirmation that any researcher who, in the fourth-quarter on the 20th century, strains to refute it resembles very much the seeker of a periculum mobile. Thus, on opening the book of Stefan Marinov, one is highly shocked. One reads the first theoretical part with the due distrust with which one reads anything that contradicts well-established and broadly accepted theories. One then reads the second experimental part with the same distrust, expecting easily to discover flaws in experiments which aim to disprove those theories. However, on reading the book to the end. one begins to realize that the experimental foundation of the general (Einstein) principle of relativity is far from being so firm and indisputable as is generally accepted. I would like to point out the so-called rotating disk experiment, performed for the first time some 60 years ago, where first-order in v/c effects were easily measured. One can doubt whether Markov's coupled-mirrors experiment is carried out well and whether the effects which he claims to have registered are not due to outside causes. However, the link Marinov shows between the rotating disk experiment and his coupled-mirrors (or coupled-shutters) experiment is so clear and indisputable that one is impelled to logically accept his results. The...
