Excerpt from Correlation of the Magnetic and Mechanical Properties of Steel A second important phase of this subject is the variation in magnetic behavior as the test piece is subjected to the influence of stress. The correlation here is so close that the strains set up in a stressed bar are accompanied by simultaneous variations in the magnetic behavior which change in character as the magnitude of the strain with respect to the elastic limit changes. Finally, mechanical inhomogeneities of whatever origin are mirrored by corresponding magnetic inhomogeneities. A magnetic test may therefore be of assistance in detecting flaws in material where the vital characteristic is reliability.
