I know no paper by a serious scientific man on a coral-reef area that does not contain records of valuable observations and correct conclusions. I have had the wish to write an account of the very gradual growth of the knowledge we now have of coral reefs, and point out how each of the successive workers has contributed toward making that knowledge what it now is. It would be a record of honorable achievement. In the short review to follow I trust I may point out some of the substantial additions to be credited to those whose opinions I shall discuss. 1. The Darwin-Dana hypothesis, in my opinion, is correct as regards the formation of offshore reefs during and after submergence; but as regards the formation of a prism of reef material, the upper...
