Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Report of the Soil Chemist and Bacteriologist of the New Jersey Agricultural College Experiment Station, New Brunswick, N. J: For the Year 1909 A greater measure of success may be attained not by counting the bacteria themselves, but by determining the extent of chemical change produced by them under given conditions. We may thus measure the rate of oxidation of carbon in the soil, either by determining the amount of carbon dioxide evolved, or the amount of oxygen absorbed; this method has not been used as extensively as it will be used in the future. It is safe to predict that it will furnish many important data and will help to explain facts that are now obscure. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
